

ShareMethods Announces Activity Stream Enhancement and Social Media Connections

South Orange, NJ - June 7, 2012 -- ShareMethods announced today the availability of an upgrade of its document management system to encompass a variety of social media integrations. The new capabilities allow customers to keep their users better informed of developments within their organization, fostering greater collaboration and leading to improved productivity.

Centerpiece of the new feature set is an activity stream view that highlights user events such as when a user emails, uploads, rates, comments on, approves, or reviews a document. Fellow users can click for more detail about each activity, or to view the document. Additional "social document" features let a user hot-link a document to Facebook, Twitter, or LinkedIn and share specific documents using social media tools rather than email.

The new features reinforce ShareMethods as a premiere collaboration environment for businesses and government organizations worldwide. Access to the social features is controlled by the account administrator. The system includes a fine-grained permissioning system to control access rights on a folder-by-folder or document-by-document basis.

About ShareMethods

ShareMethods "document cloud" service provides on-demand collaborative document management for businesses, governments, and nonprofit organizations. From anywhere, employees, partners, suppliers, and customers can access the most up-to-date materials for sales, support, legal, and many other needs. ShareMethods enables easy document management and sharing within and outside an organization via a simple, flexible and secure user interface. ShareMethods is available as a cost-effective SaaS or on-premise application. ShareMethods is integrated seamlessly with Salesforce.com, Oracle CRM, and private applications. ShareMethods is a privately held company based in New Jersey, USA.
