ShareMethods Announces New Integration Features

South Orange, NJ - Feb. 1, 2012 -- ShareMethods has expanded the integration capabilities of its document management solutions. The new capabilities provide enterprise customers new options for tying internal systems to the ShareMethods rich, user-friendly feature set.

One of the new integration features enables single-sign-on from any proprietary system. Users do not need ShareMethods separate credentials, even though the ShareMethods system is highly secure. Instead, by utilizing the new API, another system can pass an authenticated user seamlessly into the ShareMethods cloud application.

Another integration feature accommodates a different situation, where an organization's users need to get into ShareMethods seamlessly by requesting and obtaining a username and password. The organization can accomplish this by means of the ShareMethods' self-registration feature. An administrator may define in advance which email domains or sub-domains to allow. Users with an email address at one of the designated domains then may register and obtain ShareMethods credentials without other intervention on the part of the organization's administration.

About ShareMethods

ShareMethods "document cloud" service provides on-demand collaborative document management for businesses, governments, and nonprofit organizations. From anywhere, employees, partners, suppliers, and customers can access the most up-to-date materials for sales, support, legal, and many other needs. ShareMethods enables easy document management and sharing within and outside an organization via a simple, flexible and secure user interface. ShareMethods is available as a cost-effective SaaS or on-premise application. ShareMethods is integrated seamlessly with Salesforce.com, Oracle CRM, and private applications. ShareMethods is a privately held company based in New Jersey, USA.
