

ShareMethods Announces Private Cloud

South Orange, NJ - Mar. 4, 2013 -- ShareMethods announces that its premiere cloud-based collaboration solution now is offered in a private cloud version. This new option is intended to meet the strictest security requirements of corporations and governments organizations.

A private cloud typically is configured on a private network or behind a firewall, without allowing access from the internet. In such a case, the ShareMethods system now can be installed on-premise to comply with security needs. Users within the private network experience the application as if it were on the public internet.

"Private cloud arrangements are an important option for the most security-conscious organizations," said Doran Howitt, ShareMethod's vice-president, business development. "Other software-as-a-service [SaaS] solution providers typically have nothing to offer an organization that needs to keep sensitive documents on-site for policy or compliance reasons. ShareMethods is committed to providing the same software on-premise as well as via public cloud, whichever best suits customer requirements."

Customers also have the option of operating the ShareMethods on-premise version as a service provider themselves, offering SaaS sub-accounts to other organizations.

The ShareMethods system is built on industry-standard java and SQL technology, which many user IT departments are adept at supporting. It is initially available for Windows Server operating systems. A Linux release is planned as well.

About ShareMethods

ShareMethods "document cloud" service provides on-demand collaborative document management for businesses, governments, and nonprofit organizations. From anywhere, employees, partners, suppliers, and customers can access the most up-to-date materials for sales, support, legal, and many other needs. ShareMethods enables easy document management and sharing within and outside an organization via a simple, flexible and secure user interface. ShareMethods is available as a cost-effective SaaS or on-premise application. ShareMethods is integrated seamlessly with Salesforce.com, Oracle CRM, and private applications. ShareMethods is a privately held company based in New Jersey, USA.
